Turn any USB Port into a Complete Avionics 1553/429/717 Test Interface!

Data Device Corporation (DDC) introduces a new Multi-I/O Advanced Avionics Tester that connects to any USB port to provide comprehensive avionics test, simulation, and analysis support.

The BU-67211UX combines up to two dual redundant MIL-STD-1553 channels, with up to eight user programmable Receive/Transmit ARINC 429 channels, and up to two user programmable Receive/Transmit ARINC 717 channels, while providing support for IRIG-B, CANbus, Serial I/O, and Discrete I/O interfaces. The 1553 channels provide unique features and functionality such as concurrent BC + Multi-RT + MT, real-time intermessage event/data modification, error injection, advanced error sampling, and many other elements that are an excellent fit for new product development, systems integration labs, production test labs, and simulators. Each ARINC 429 channel is programmable to be a transmitter or receiver which allows for maximum flexibility and is ideal for systems integration labs.

Simplify Test Applications with DDC's New High Accuracy 1/2 Size PCIe Synchro/Resolver Output Card!

Data Device Corporation (DDC) introduces its exciting new Digital-to-Synchro/Resolver simulation PCIe card (SB-3623X), designed for test applications involving instrument grade angle position simulation of up to 6 channels at 30 arc seconds accuracy. This 1/2 size RoHS compliant card easily integrates with the smaller size desktops to perform lab testing on position sense for motor control, industrial automation, robotics, gimbal positioning, and valve control.

Themis announces the RuggedStore 3100 Network Storage Appliance.

Themis Computer, today announced the Themis RuggedStore™ 3100 network storage appliance. The RuggedStore 3100 appliance combines Themis's thermal and kinetic design expertise with EMC® VNXe® unified storage systems to deliver an unmatched combination of capabilities, simplicity, and efficiency for ruggedized storage. The RuggedStore 3100 enables storage consolidation with seamless management that eliminates the boundaries between applications and their storage. Designed for military critical defense and industrial customers, the new systems are capable of withstanding wide temperature ranges, intense shock and vibration. The base unit can hold up to 12 drives, with scalability of up to 96 total drives, using storage expansion enclosures.
